

CONTINUO ORGAN

The organ is suitable for orchestral accompaniment or for small churches where the main organ is undergoing repairs and restoration.

The organ is similar in concept to our very successful continuo organs which can be heard in Ely and Ripon Cathedrals, Reading University, Winter Park, Florida and Lake Forest Illinois.

Stopped Diapason	8ft
Stopped Flute	4ft
Fifteenth	2ft

Manual compass: 54 notes

Tranposable from A=440 Hz
to A=415Hz as an option.

CASEWORK

The organ is fully enclosed in casework of American White Oak with doors which open to reveal attractive fretwork panels. It is approximately 120cm wide by 60cm deep by 110cm high and can be split into two sections, one 30cm high, the other 80cm high for transporting in an estate car.

VOICING/SCALING

Wider pipe scales than are normally associated with an organ of this size have been used to create a warm sound capable of filling even moderately large spaces.

These organs stand well and require little tuning after installation.
